Securing Your Web World

Protecting your business against the latest Web threats has become an incredibly complicated task. The consequences of external attacks, internal security breaches, and Internet abuse have placed security high on the small business agenda. With Genisyst support of Trend Micro Worry-Free Business Security for small businesses you can be assured of the best protection available.

Worry-Free Business Security

Rated #1 for Small Business Security

Trend Micro™ Worry-Free™ Business Security Advanced and Standard solutions provide fast, effective, and simple protection against viruses, cybercriminals, and data loss, so you can focus on your business, instead of worrying about Internet security. In independent tests*, Worry-Free Business Security is rated best at blocking threats *before* they reach your computers, file servers, and mail servers.

Businesses with limited IT staff and resources need protection that is designed for them, not huge corporations nor for an individual consumer. That's why Trend Micro offers several easy-to-set-up and use all-in-one solutions to meet the unique needs of these businesses. Worry-Free Business Security solutions provide effective protection with minimal impact on computer performance by leveraging the Trend Micro™ Smart Protection Network™-the same infrastructure that safeguards all our customers, from Fortune 500 enterprises to millions of consumers.

Worry-Free™ Business Security Advanced protects Windows PCs, Macs, file servers, and mail servers from viruses, threats, and dangerous websites. The latest Advanced edition keeps business information private by locking down USB drives and other storage device as well as preventing data loss through email. Also, it blocks spam both before it reaches and on Exchange Servers.

Worry-Free™ Business Security Standard protects Windows PCs and servers from viruses, threats, and dangerous websites. It features security scans that run quickly and quietly in the background and keeps business information private by locking down USB drives and other storage devices.

Genisyst provides users with competitive pricing on one-year and two-year Trend Micro product licences and also offers the very cost-effective option of monthly-rental pricing too. Email sales@genisyst.com.au for details or call 1300 464 364.

Key Benefits

Fast

- Powered by Trend Micro Smart Protection Network to identify and block new and emerging threats before they impact your business
- Most updates are stored either on the local server or by Trend Micro, not on your computers to deliver protection without affecting performance or speed
- Virus scans run quietly and quickly in the background so your computers are unaffected

Effective

- Stops viruses, spyware, spam, phishing attacks, and other web threats before they can reach your business machines
- Data loss prevention stops private business information from being shared via USB drives and other attached storage devices as well as in email messages
- Multi-layer antispam for Advanced; POP3 antispam for Standard and Services
- URL filtering prevents employees from visiting inappropriate and infected websites and downloading threats

Simple

- Specifically designed for businesses with limited IT staff and resources
- Easy to install and use, no IT expertise required
- Traffic light dashboard makes security status understood at a glance and supported by easy to read security reports
